Name	Puli Jagadeesh
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming creates an open environment where practical ideas can be shared and refined to solve a problem. For this project, the activity focuses on identifying workable ways to automate the licensed software installation request process using ServiceNow.

Step-1: Team Gathering, Collaboration and Selection of the Problem Statement

Selected Problem Statement

An employee requests licensed software through the Service Catalog. The request needs approval followed by IT fulfillment. A standardized ServiceNow workflow can automate approval and task creation, reduce manual coordination, and make request tracking easier.

Project Requirements

Software Requirements

- ServiceNow instance (Personal Developer Instance or Enterprise Instance)
- Flow Designer enabled
- Email Notification and Email Script support

Hardware Requirements

- Standard desktop or laptop computer
- Minimum 4 GB RAM (8 GB recommended)
- Stable internet connection

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated and grouped around the major activities involved in the licensed software request and installation workflow.

Request Management

- Create a Service Catalog item for licensed software installation requests.
- Capture employee details, software name, purpose, and required information in the form.

Approval

- Route the submitted request to the employee's manager for approval.
- Use Flow Designer to automate approval routing and decisions.
- Update the request based on the approval or rejection outcome.

Fulfillment

- Generate a Catalog Task after approval.
- Assign the task to the appropriate IT support team.
- Update the task after the software installation is completed.

Notification

- Send an email when manager approval is required.
- Notify the requester when the request is approved or rejected.
- Send a completion notification after installation.

Tracking

- Allow the requester to check the current request status.
- Maintain request and task history for future reference.

Step-3: Idea Prioritization

The ideas are prioritized according to their importance to the project and their feasibility in a ServiceNow Personal Developer Instance.

Idea	Importance	Feasibility	Priority
Service Catalog software request form	High	High	1
Automated manager approval	High	High	2
Create Catalog Task after approval	High	High	3
Request status tracking	High	High	4
Email notifications	Medium	High	5

Final Selected Idea

Automate the licensed software installation request using a ServiceNow Service Catalog item, Flow Designer approval, and Catalog Task creation.

Reason for Selection

This idea is selected because it directly addresses the problem, minimizes manual coordination, creates a structured approval path, and can be implemented with standard ServiceNow features available in the development environment.
